Project **SOMEONE**, Concordia University

## **OTHERING ACROSS TIME: MEASURING RADICAL POSTING TRAJECTORIES ONLINE**

Ryan Scrivens, Garth Davies & Richard Frank, *Simon Fraser University*

# BACKGROUND

## OTHERING BY THE RADICAL RIGHT:

# BACKGROUND

## IN-GROUPS

- Shared values and interests
- Develop through interactions with like-minded others and oppositional forces

## OUT-GROUPS

- Opposing values and interests
- Competing for X

# BACKGROUND

\*\*\* COLLECTIVE IDENTITY \*\*\*

# BACKGROUND

## OTHERING BY THE RADICAL RIGHT:

- **The Internet**, especially right-wing extremist (RWE) forums, facilitate othering
  - Cheap/fast/convenient (**radical**) communications

## **PREVIOUS STUDIES:**

- “Us” versus “them” dynamic in RWE spaces
  - “Hornet’s nests”, “lone wolf incubators”, and “echo chambers of hate” (**polarizing spaces**)
- Research has not **measured** this over time

# BACKGROUND

## IN-DEPTH CONTENT ANALYSES & CASE STUDIES

Rich description of othering, collective identity, and polarizing spaces

## ADVANCED COMPUTATIONAL TOOLS

Develop risk indicator tools/algorithms

Measure levels of radicalization

# BACKGROUND

# BACKGROUND

# STUDY OVERVIEW

## DATA:

- **Stormfront Canada:** 124,058 posts, 7,014 users, ~15 yrs

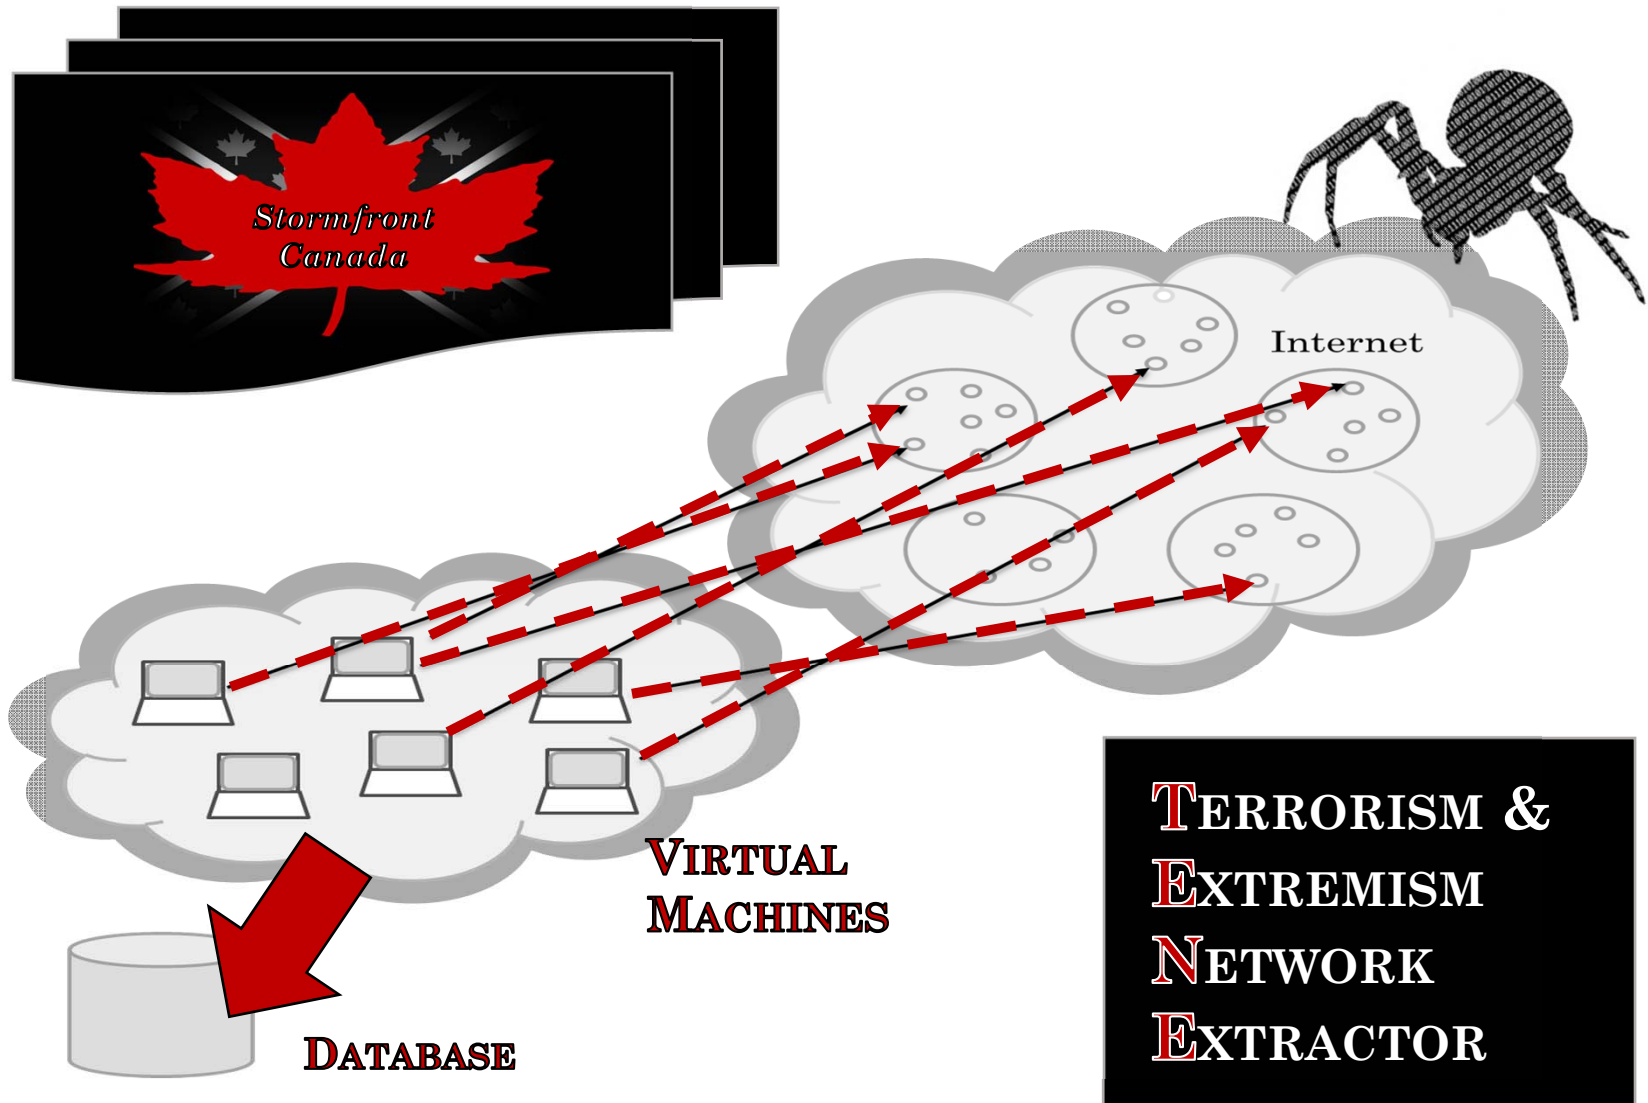

## RESEARCH QUESTION:

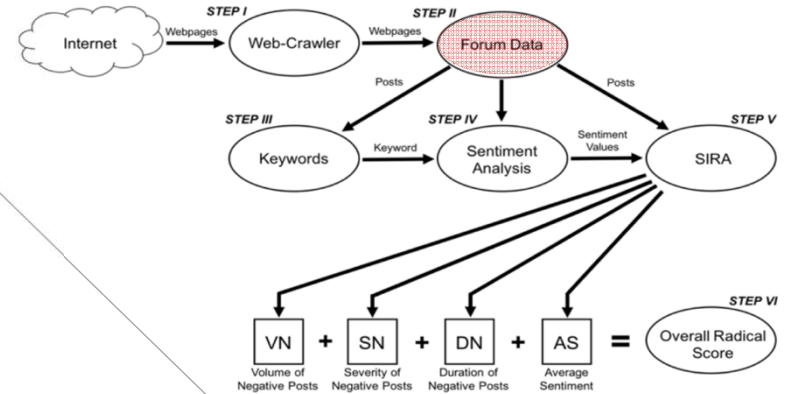

- *How does radical right-wing posting behaviour transpire and evolve over time?*
  - *How does (1) anti-Semitic, (2) anti-Black, and (3) anti-LGBTQ posting behaviour transpire and evolve over time?*

## METHODS:

- **Sentiment analysis-based algorithm:** adapts criminal career measures and semi-parametric group-based modeling

# DATA AND SAMPLE

Identify **topics** of discussion  
deemed **radical**

STEP V  
SIRA

STEP VI  
Overall Radical  
Score

## KEYWORD SELECTION PROCEDURE:

1. **Jews:** 287 words
2. **Blacks:** 1,254 words
3. **LGBTQs:** 309 words

ADVERS  
THE RA  
RIGHT:

## EACH TOPIC LIST:

- Identified **frequency** with which authors posted with keywords
- Found point of **diminishing returns** in distribution graph

*\*\*Calculate average point of diminishing returns*

Figure A. Word frequency distribution graph and inflection point for discussions about Jews

Figure B. Word frequency distribution graph and inflection point for discussions about Blacks

Figure C. Word frequency distribution graph and inflection point for discussions about LGBTQs

STEP V

SIRA

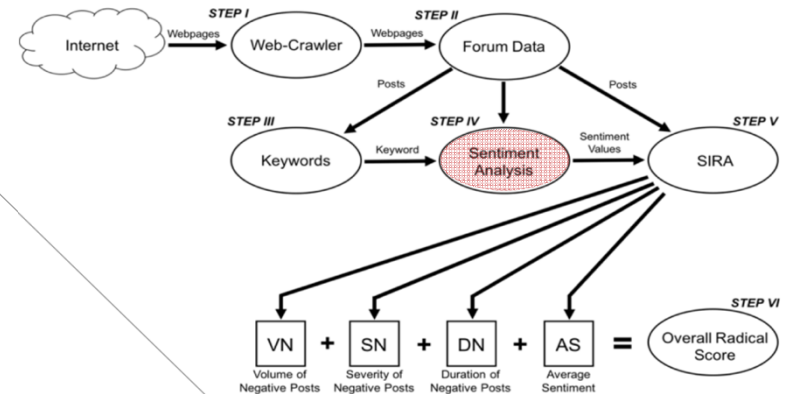

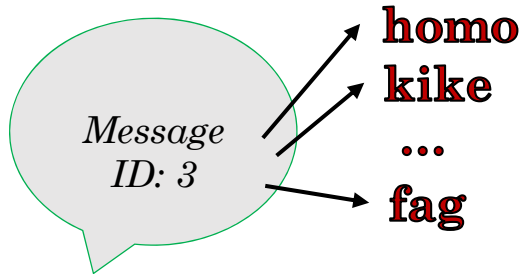

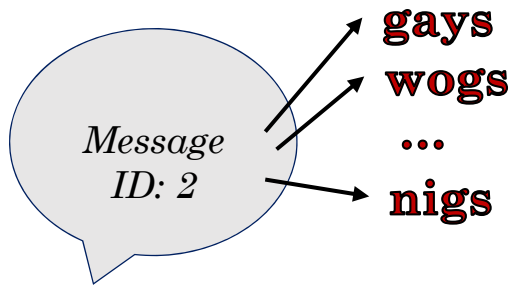

STEP VI

Overall Radical Score

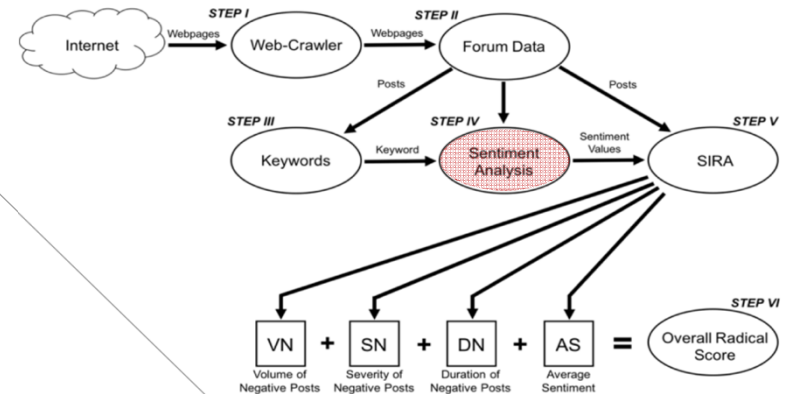

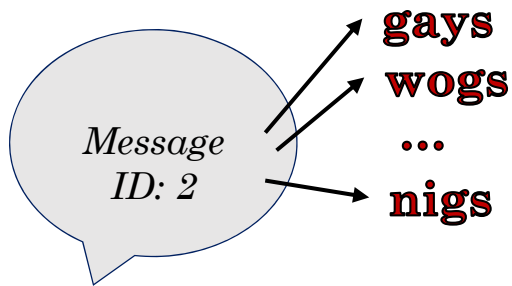

## STANDARDIZING # OF WORDS/TOPIC:

= average of 42 words/topic list

= **random sample of 42 words/topic**

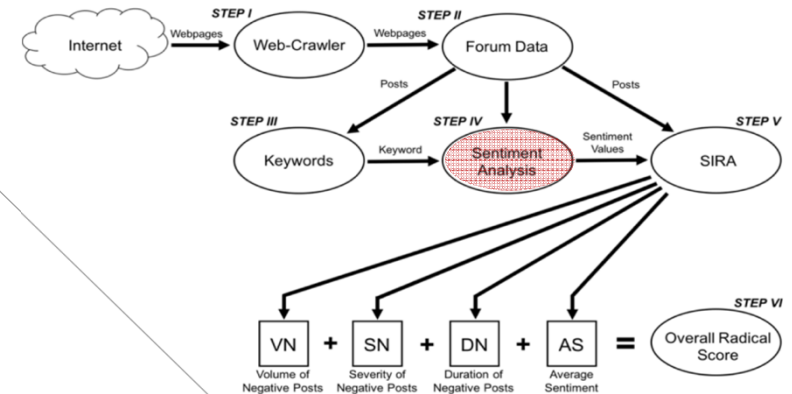

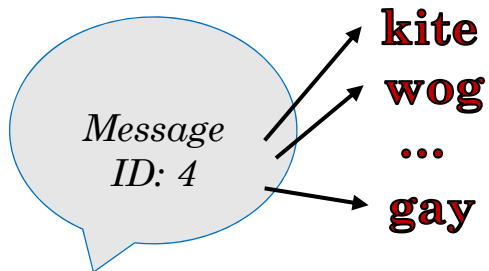

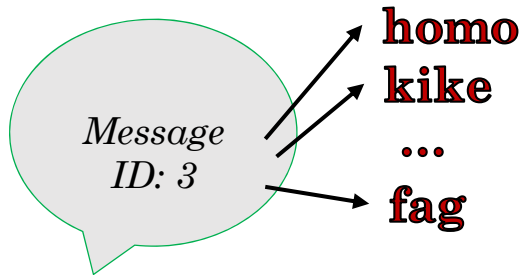

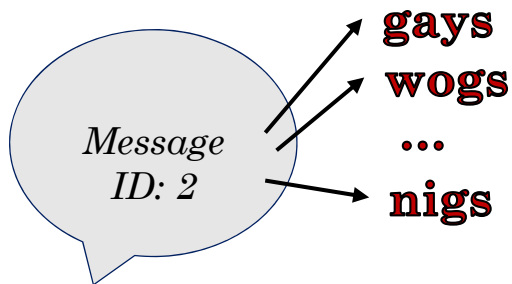

Determine authors' **opinions** around keywords by creating sentiment scores.

## SentiStrength:

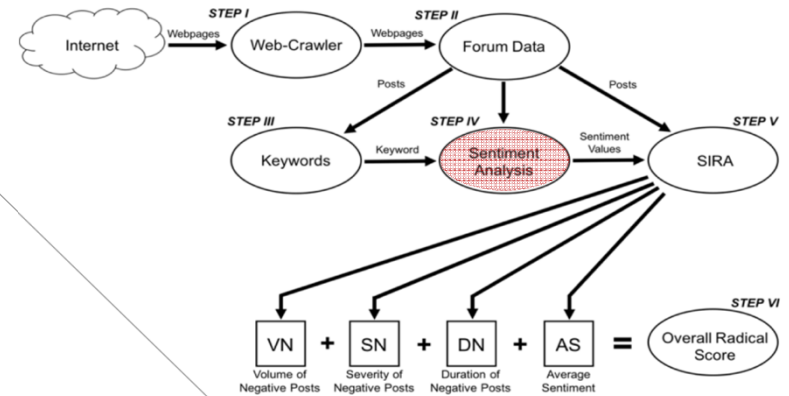

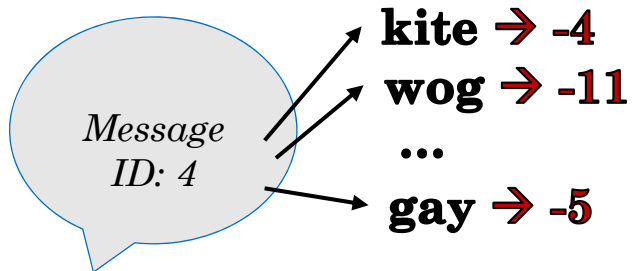

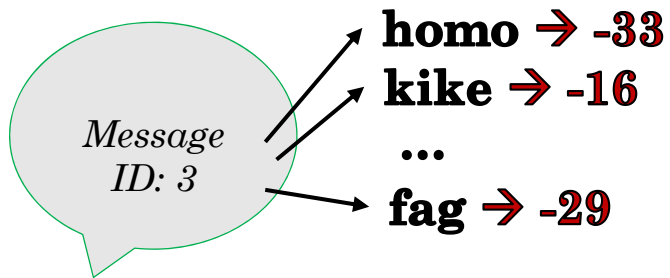

- Established software
- Free to use for research
- Numerous languages

## KEYWORD-BASED APPROACH:

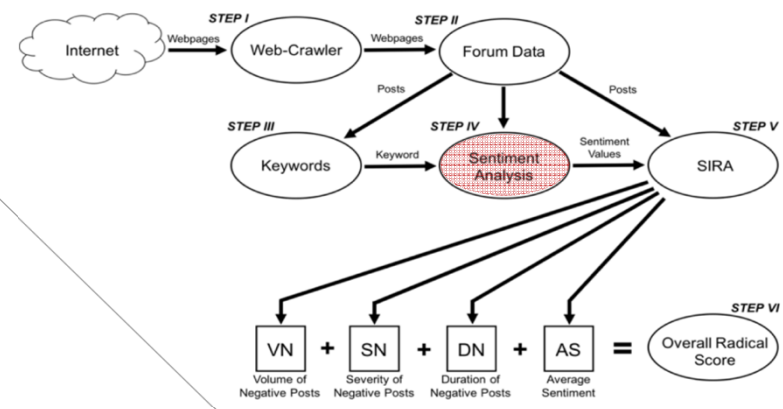

- Analyzes sentiment surrounding assigned list of keywords
- Assigns *polarity values* to those keywords

## KEYWORD-BASED APPROACH:

- Analyzes sentiment surrounding assigned list of keywords
- Assigns *polarity values* to those keywords

Message ID: 1  
 Zionist → -2  
 ...  
 nogs → -3

 ...  
 gay → -5

# STEMMING METHOD

Sentiment scores are **augmented** by characters that influence values (e.g., booster words, negative words, punctuation, etc.)

I love my **Jewish** [3], **Black** [3], and **gay** [3] friends  
 [sentence: 9]

I want to kill every single **Jew** [-59] in the entire world  
 [sentence: -59]

Message ID: 1  
 Zionist → -2  
 ...  
 nogs → -3

Message ID: 2  
 gays → -21  
 wogs → -1  
 ...  
 nigs → -13

Message ID: 3  
 homo → -33  
 kike → -16  
 ...

	Keyword 1	Keyword 2	...	Keyword 67
Author A – Post 1	-2	1	...	
Post 2	3	-4	...	8
Post 3	0.5	-5		
...	...	...	...	
Post 99				-31

Message ID: 1

wog → -11  
...  
gay → -5

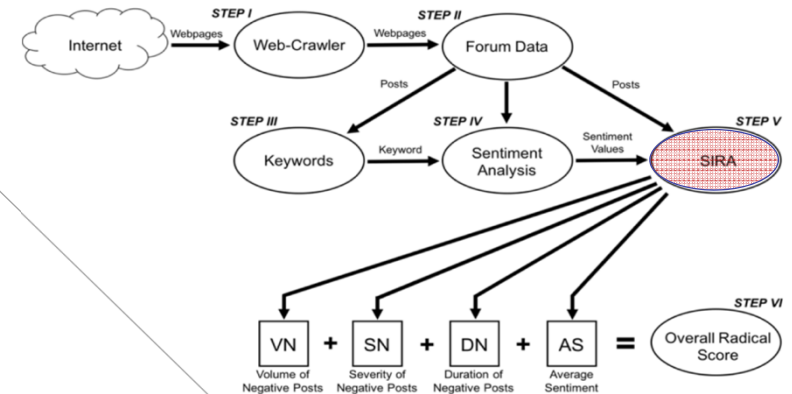

How do we identify  
**“radical/othering”**  
posting behaviour  
online?

# SIRA ALGORITHM:

1.) Relative **average** sentiment score (10 points)

2.) **Volume** of negative posts (10 points)

3.) **Severity** of negative posts (10 points)

Message  
ID: 3

homo → -33

kike → -16

...

fag → -29

Message  
ID: 4

kite → -4

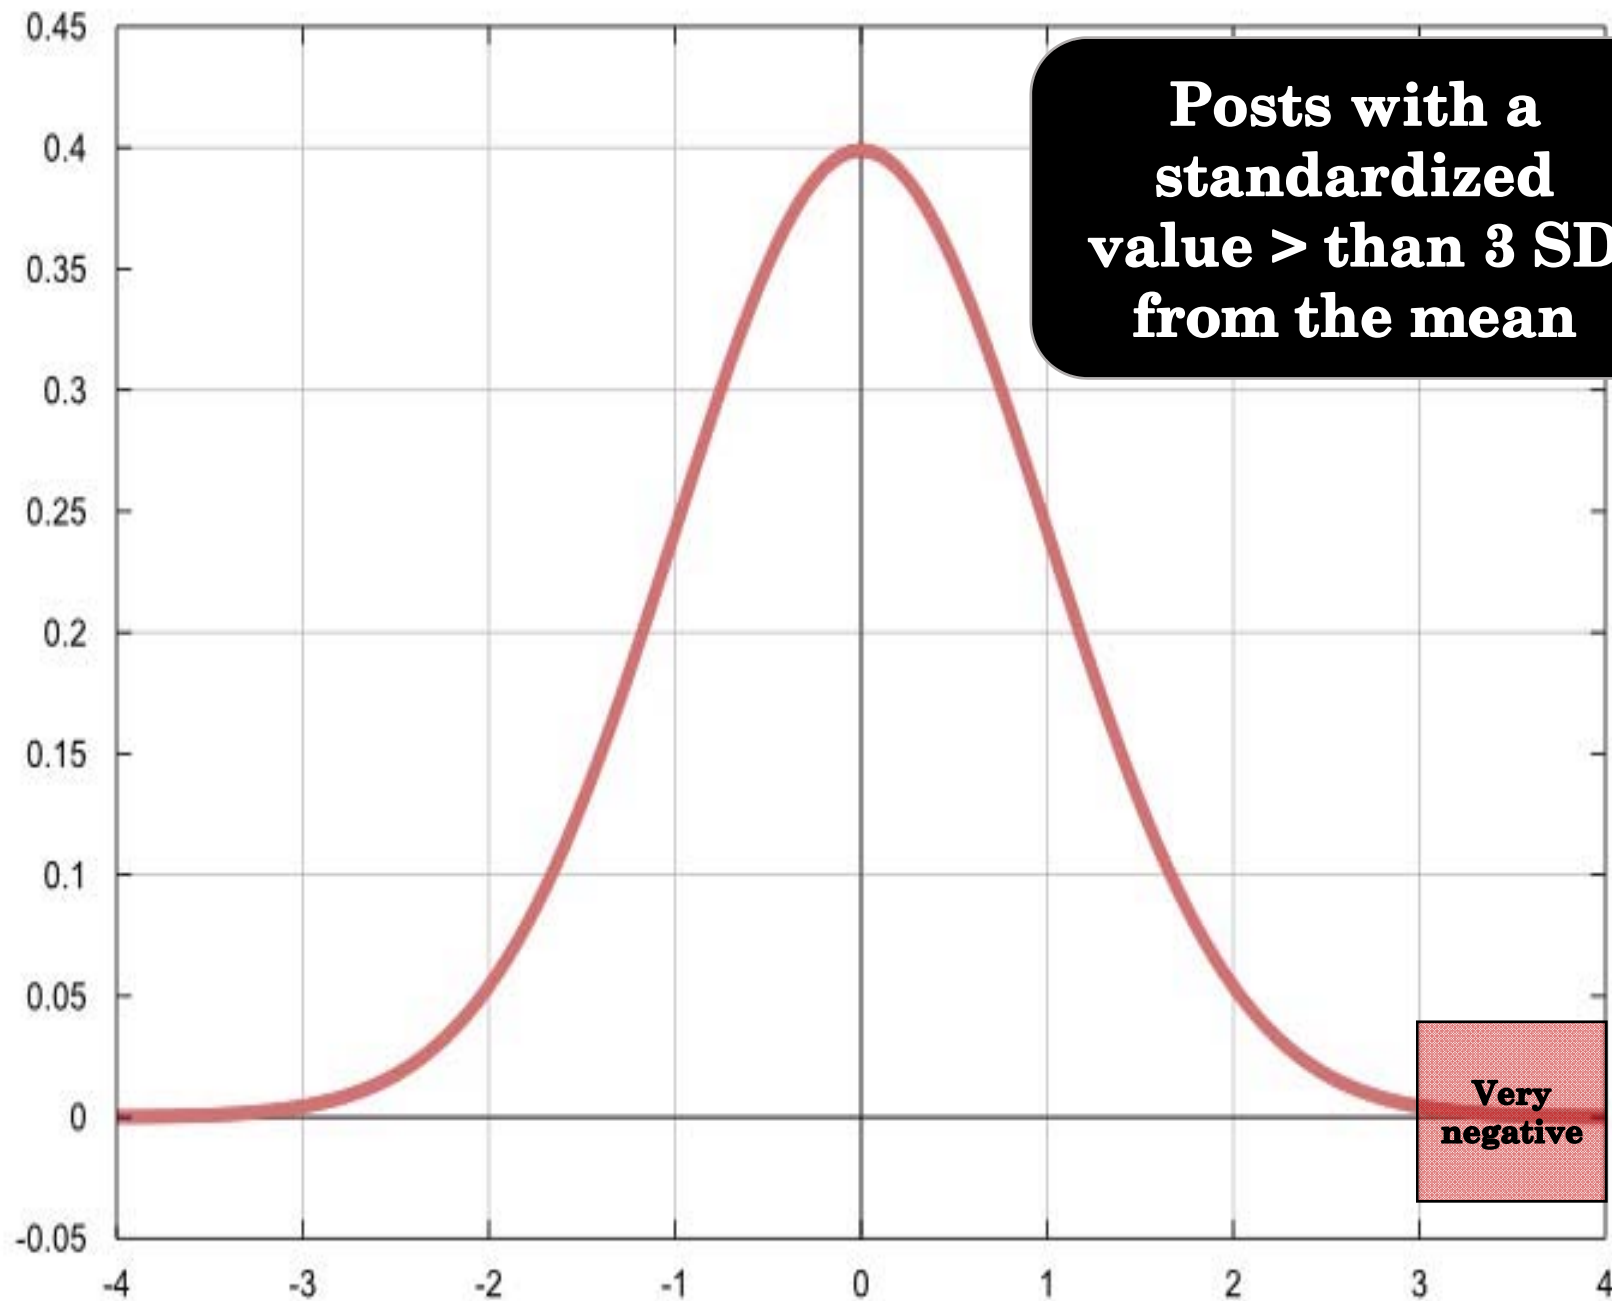

wog → -11

...

gay → -5

How do we identify  
“**radical/othering**”  
posting behaviour  
online?

**Figure 1.** Standard Normal Distribution

## SIRA ALGORITHM:

- 1.) Relative **average** sentiment score (10 points)
- 2.) **Volume** of negative posts (10 points)
- 3.) **Severity** of negative posts (10 points)
- 4.) **Duration** of negative posts (10 points)

=

**RADICAL  
SCORE**  
(40 points)

How do we identify  
“**radical/othering**”  
posting behaviour  
online?

## CHRONIC RADICAL POSTING BEHAVIOUR

1.) Relative **average** sentiment score (10 points)

2.) **Volume** of negative posts (10 points)

3.) **Severity** of negative posts (10 points)

4.) **Duration** of negative posts (10 points)

homo → -33

kike → -16

...

- Volume of activity increases chances of reaching and communicating with more people

- Language is power: clarity, assertive, direct, and intensity (emotion) of language

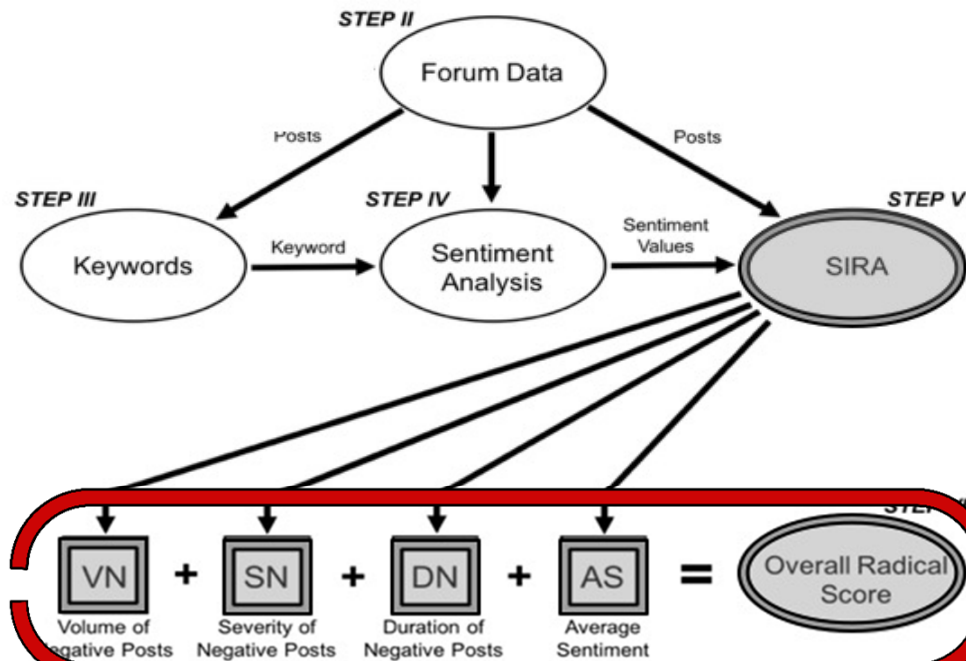

- Time spent in a particular setting shows level of commitment

## CRIMINAL CAREER MEASURES (Blumstein et al., 1986)

- Provides a reference point in which to gauge levels of radical engagement online (measurement tool)
- Disaggregates chronic from non-chronic radical authors

# TEMPORAL SIRA

**START POINT:**  
Authors' first anti-\_\_\_\_  
post

**DV:** radical score  
**IV:** time (month)

**AGGREGATED TO MONTH**

# TEMPORAL SIRA

## GROUP-BASED TRAJECTORY MODELING:

- Identifies distinct **clusters** of groups sharing similar patterns over time
- Identifies **chronic** radical posting behaviour across time

# TEMPORAL SIRA

**ITERATIVE  
PROCESS**

1. Bayesian Information Criterion (BIC)
2. Odds of correct classification (OCC)
3. 95% confidence interval extension

## BEST MODEL FIT

**1 = linear**

**2 = quadratic**

**3 = cubic**

**(POLYNOMIAL FUNCTION FORM)**

# RESULTS

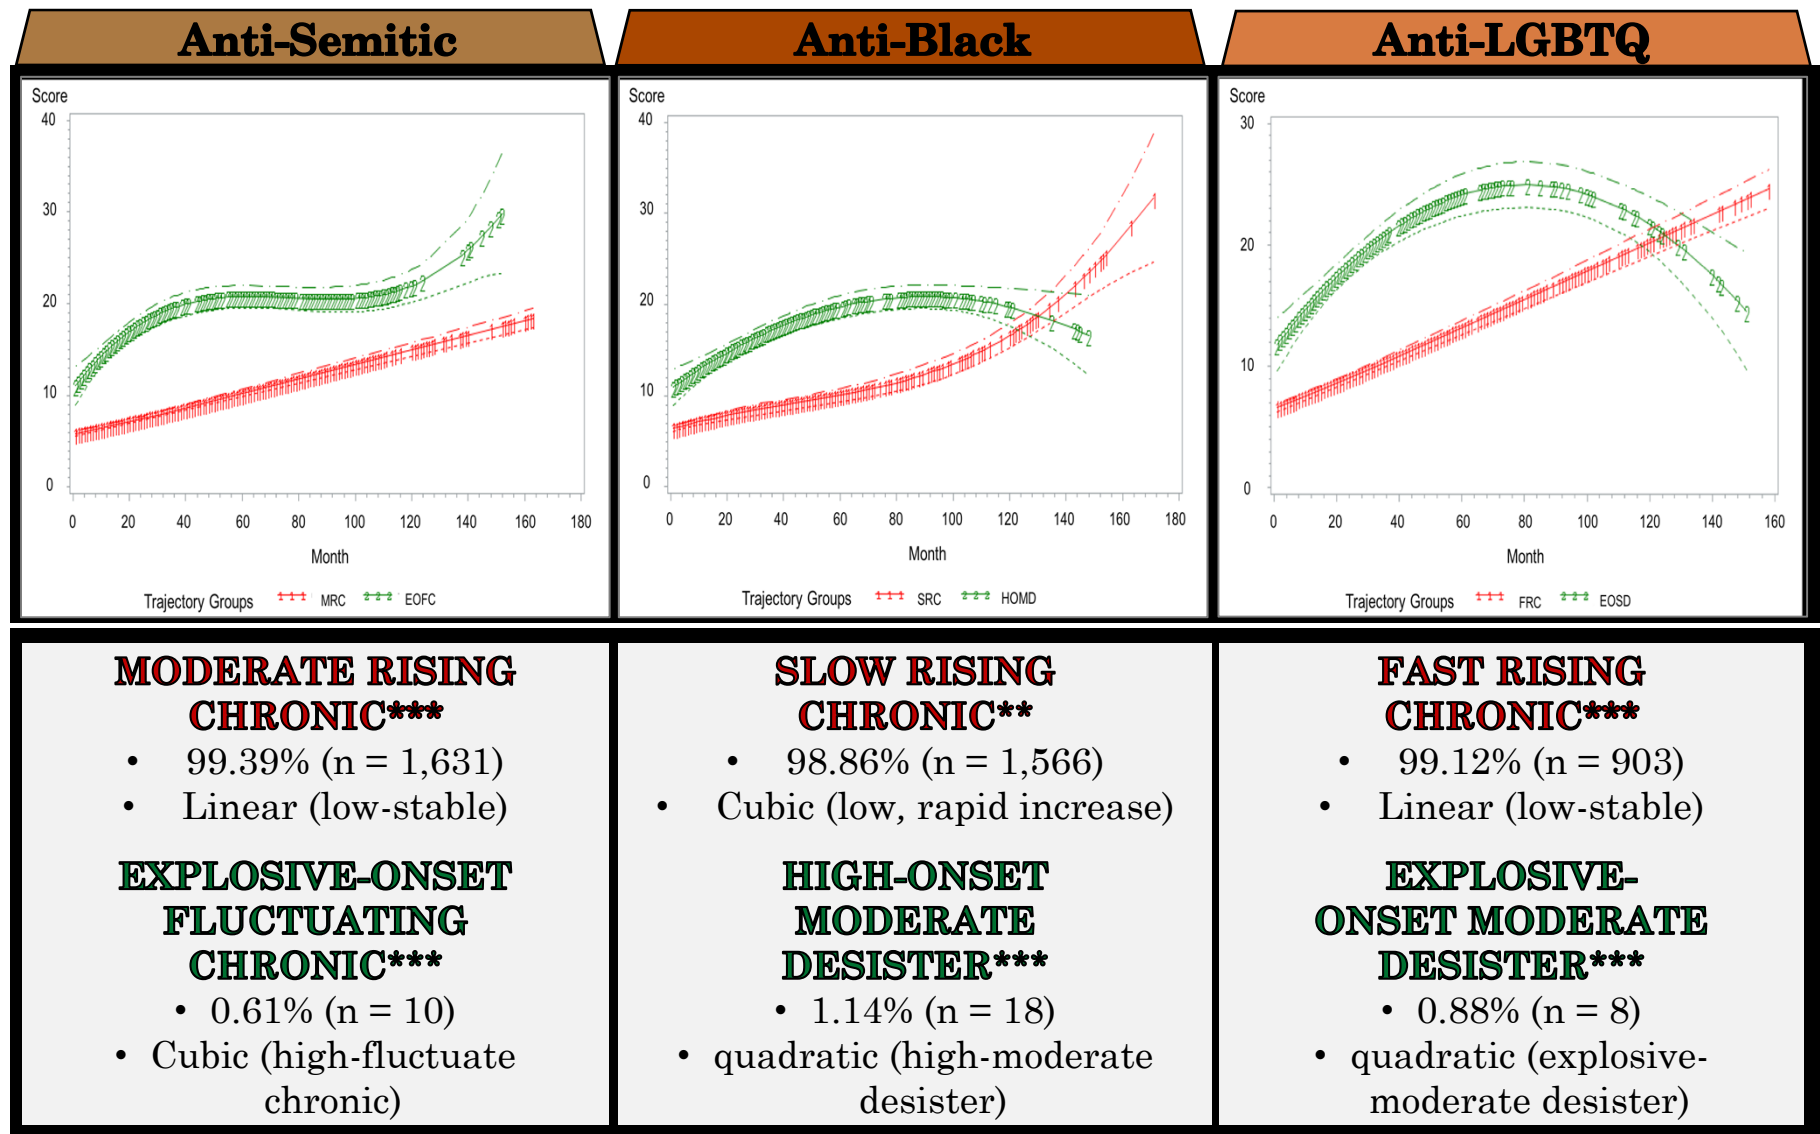

- Most discussions were about Jews; targeted at highest volume
- Discussions about LGBTQs were most negative and over longest time
- Outliers accounted for large proportion of variation

## HIGHLIGHTS

	Sentiment about Jews (n = 1,641)		Sentiment about Blacks (n = 1,584)		Sentiment about LGBTQs (n = 911)	
	Count	Mean (SD)	Count	Mean (SD)	Count	Mean (SD)
Keywords found in data	9,323	5.68 (25.81)	5,624	3.55 (11.72)	3,541	3.89 (13.41)
Negative posts	4,724	2.88 (14.20)	2,490	1.57 (6.17)	2,217	2.43 (9.22)
Very negative posts	138	0.08 (0.93)	78	0.05 (0.48)	49	0.05 (0.63)
Negative posting duration (days)	-	128.94 (461.81)	-	114.04 (442.94)	-	168.53 (545.09)
Posting score	-	-1.50 (2.92)	-	-1.17 (2.50)	-	-1.90 (2.55)
Overall radical score	-	4.31 (3.55)	-	4.59 (3.31)	-	4.68 (3.64)

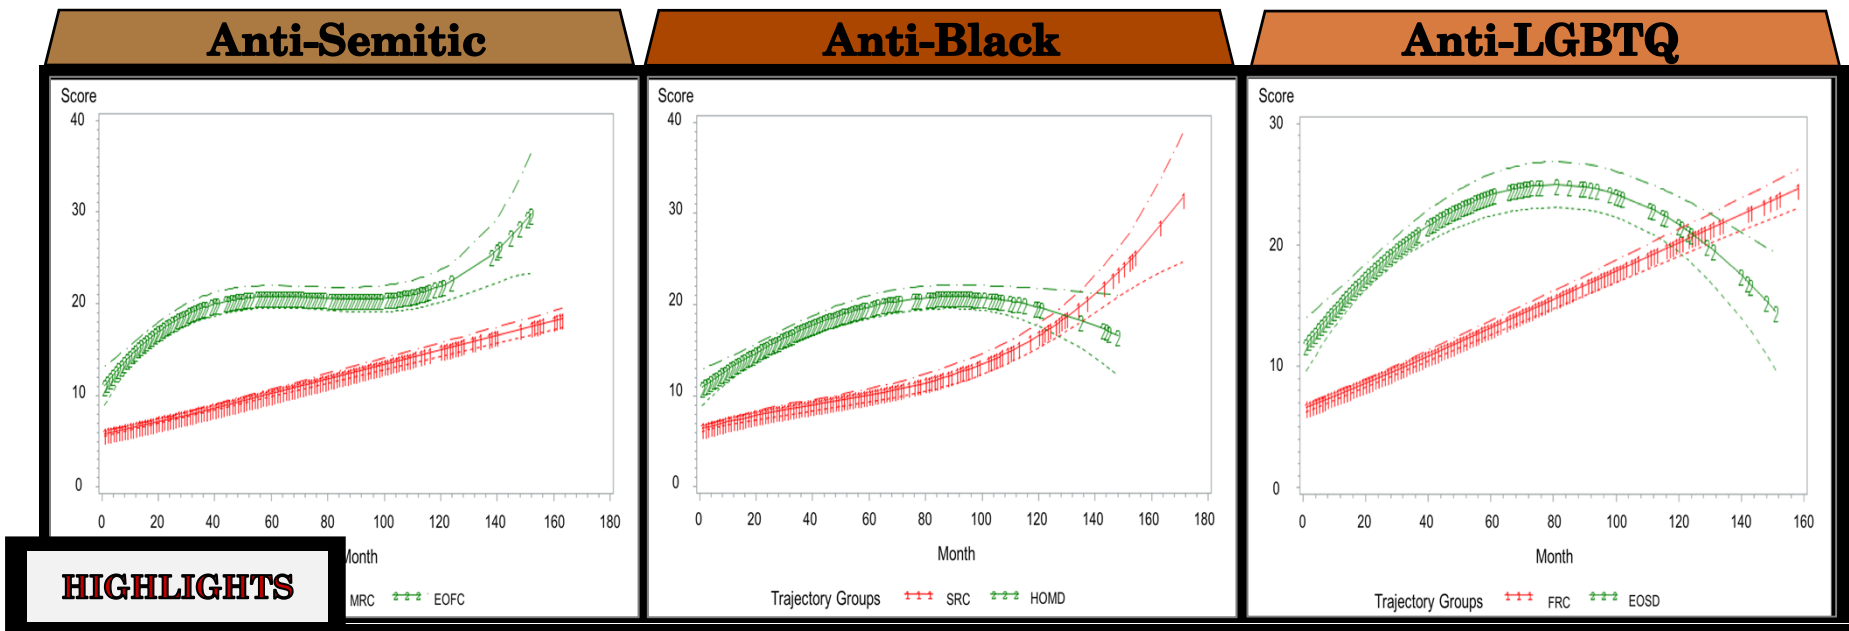

# RESULTS

## RADICAL POSTING TRAJECTORIES:

# RESULTS

## RADICAL POSTING TRAJECTORIES:

- **MOST AUTHORS:**
  - Follow a low-level chronic posting trajectory (slow and steady)
  - Tail off of anti-Semitic/Black/LGBTQ behaviour; slowest for anti-Semitic
- **Anti-Semitic trajectory:** has no desister group
- **Anti-LGBTQ trajectory:** quickly becoming the most radical
- Small group of desisters: explosive onset but “cool off” at half-way point

# DISCUSSION

## OBJECTIVE:

- *How does radical right-wing posting behaviour transpire and evolve over time?*
- Identify group-level trajectory patterns for **radical/othering discussions** on a RWE forum over time
  - *Anti-Semitic/Black/LGBTQ* sentiment (collective identity)

## KEY FINDINGS:

- Levels of othering: Jews (**scope**) and LGBTQs (**depth**)
- Levels of othering increases over time
  - *Anti-Semitic*: most stable over time (**ZOG conspiracy**)
  - *Anti-LGBTQ*: most explosive & intensifying (**PRIDE movement**)

# LIMITATIONS AND FUTURE RESEARCH

## ADVERSARIES, KEYWORDS, AND CONTROLS:

- Include other adversary groups and larger lists of words
- Control group: random sample from other sub-forums

## STORMFRONT CANADA DATA:

- Limited to one sub-forum

## LONG VERSUS SHORT-TERM ACTIVITY

- Examine posting activity of short-term posters
- Change the IV from month to week or day

# LIMITATIONS AND FUTURE RESEARCH

## SENTIMENT ANALYSIS:

- Keywords are assumed to be radical
- Word frequencies or re-calibrate sentiment analysis

## SNA OF RADICAL POSTERS:

- Include SNA metric into algorithm:
  - Authors using specific set of words, clustering around authors
  - Identify opinion leaders and analyze their network

## UNPACKING THE COLLECTIVE IDENTITY:

- Treats the collective identity of RWE as a single entity
- Discussions around heroes, martyrs, folklores, groups and family

# POLICY IMPLICATIONS

## **ANALYSIS OF ONLINE DATA:**

- Rich with information about how movement adherents communicate, as well as their radical identities and target

## **USE OF COMPUTATIONAL TOOLS:**

- Overcoming **Big Data challenge** to identify radical content online (needle in a haystack)
  - Important to understand the online space under review

## **BRIDGING THE SCIENCES:**

- Computer science and social science approaches
- Draw from the strengths of both disciplines
